ABSTRACT

AnyLogic is the technology leader and the most popular tool for building simulation models for business applications. The AnyLogic ecosystem includes a flexible core, a number of vertical solutions for material handling, supply chains, rail and road transportation, pedestrian modeling, etc., and AnyLogic Cloud – a highly scalable execution environment for AnyLogic models. We will do a quick overview of AnyLogic modeling technology and then demonstrate the alpha version of AnyLogic 9 – a new generation of modeling software with a fully functional web interface, cloud, server, and desktop installation, teamwork support, a choice of multiple scripting languages, and other new exciting features.
