Atlanta, GA 30332, USA

ABSTRACT
This panel discusses the role of simulation research/researchers in industry and for what type of work industry hires Ph.D. or M.S. students in the simulation field. The panelists include simulation experts in industry, and university professors who had rich working/consulting experience in industry. This panel also aims to give an insight into what to expect when searching for a job in industry and working in industry as an engineer with advanced degrees in the simulation field.

AUTHOR BIOGRAPHIES

BAHAR BILLER is a Principal Operations Research Specialist at the Advanced Analytics Center of Excellence of SAS Institute. In this role, she collaborates with clients, product managers, and researchers to improve the efficiency and resiliency of industrial supply chains and healthcare and life sciences operations. Previous roles include Senior Operations Researcher at General Electric’s Global Research Center and Associate Professor at Carnegie Mellon University’s Tepper School of Business. Bahar received a National Science Foundation CAREER award in 2006 and the Presidential Early Career Award for Scientists and Engineers in 2007. She is a past-President of the INFORMS Simulation Society and the General Chair of Winter Simulation Conference 2023. Her email address is Bahar.Biller@sas.com.

WEIWEI CHEN is an Associate Professor in the Department of Supply Chain Management at Rutgers University. Prior to joining Rutgers, he worked at GE Global Research. He received his Ph.D. degree in Industrial Engineering from the University of Wisconsin-Madison in 2010. His research interests include data analytics in service operations, supply chain optimization, as well as simulation optimization and randomized global optimization. His email address is wchen@business.rutgers.edu.
PETER FRAZIER is the Eleanor and Howard Morgan Professor of Operations Research and Information Engineering at Cornell University. He is also a Senior Staff Applied Scientist at Uber. At Cornell, he does research in Bayesian optimization, multi-armed bandits, and other areas at the interface between machine learning and operations research. He also leads Cornell’s COVID-19 Mathematical Modeling Team, which helped design Cornell’s asymptomatic COVID-19 testing program and provides university leadership with decision support for the pandemic. At Uber, he managed UberPool’s data science group and currently helps to design Uber’s pricing and incentive systems. His email address is pf98@cornell.edu.

ALLEN GREENWOOD, Ph.D., P.E. (retired) is Professor Emeritus of Industrial and Systems Engineering at Mississippi State University and Simulation Education Specialist at FlexSim Software Products, Inc. In addition, he was a Professor of Engineering Management at Poznan University of Technology in Poland, Professor and Chair of the Department of Engineering Management at Prince Sultan University in the Kingdom of Saudi Arabia, Professor of Engineering at the American University of Armenia, and Assistant Professor of Management Sciences at Northeastern University and Virginia Tech. At all of these institutions, he developed and taught courses in systems simulation at the undergraduate, graduate, and professional levels and led or was a principal contributor to numerous projects in industry. He has authored or co-authored over 150 creative works, including journal and conference papers, technical reports, software programs, etc. In addition, he is co-author of Applied Simulation: Modeling and Analysis Using FlexSim, currently in its fifth edition. Allen received his BSIE, MSIE, and Ph.D. (Management Science) degrees from North Carolina State University, the University of Tennessee, and Virginia Tech, respectively. His email address is allen.greenwood@flexsim.com.

SHANE G. HENDERSON is the Charles W. Lake, Jr. Chair in Productivity in the School of Operations Research and Information Engineering at Cornell University and a Fellow of INFORMS. His research interests include simulation optimization, emergency services and selected transportation problems. He is a co-creator of SimOpt, a testbed of simulation optimization problems and solvers. He worked full time for Lyft for 5 months in 2019 while on sabbatical. His web page is http://people.orie.cornell.edu/shane and his email address is sgh9@cornell.edu.

SEONG-HEE KIM is a Professor in the H. Milton Stewart School of Industrial and Systems Engineering at the Georgia Institute of Technology. She received her Ph.D. in Industrial Engineering and Management Sciences from Northwestern University in 2001. Her research interests include data-based decision-making, simulation optimization, spatiotemporal monitoring, and applications to environmental management and manufacturing. Her website is https://www2.isye.gatech.edu/~skim/ and her email address is skim@isye.gatech.edu.
